

Dynamic Triage Assessment

Target: informant

PIPELINE	Automated Triage Pipeline
CASE ID	VIGIA-REAL-002
PREPARED BY	Autonomous DFIR Agent
REPORT DATE	2026-06-12 UTC

01 Executive Summary

The subject engaged in unauthorized data exfiltration by renaming sensitive files, using personal cloud storage, and employing anti-forensic tools. The activity is characterized by a distinct 'Post-Exfiltration Cleanup' phase involving the installation of CCleaner and Eraser to destroy evidence. Furthermore, the subject exhibited 'smash-and-grab' network tactics, characterized by selective file copying followed by immediate disconnection to minimize dwell time. Communications with the conspirator included specific terminology ('conformal') that suggests a pre-planned methodology.

EXTRACTED ARTIFACTS

02 System Profile & Evidence Scope

PROPERTY	VALUE
Target Evidence Path	informant
Analysis Timestamp	2026-06-12 13:36 UTC
Analysis Tooling	Autonomous MCP Framework

03 Extracted Artifacts Matrix

ARTIFACT NAME / IDENTIFIER	FORENSIC ANALYSIS & DESCRIPTION
Logon/Logoff Activity	Logon activity detected outside permitted hours and suspicious logoff patterns, indicating an attempt to operate outside standard monitoring windows.
External Communication	Communication with external domain requesting confidential data. Includes specific terminology ('conformal') which warrants further investigation as a potential code word.
File Renaming	Deliberate extension changes to conceal file content.
Cloud Exfiltration & Cleanup	Use of personal Google Drive for data exfiltration. Followed by a distinct 'Post-Exfiltration Cleanup' phase involving the installation of CCleaner and Eraser to destroy evidence.
Network Access	Access to secured network drive followed by selective file copying. The immediate disconnection after copying indicates a 'smash-and-grab' tactic to minimize dwell time.
