

Dynamic Triage Assessment

Target: stevev

PIPELINE	Automated Triage Pipeline
CASE ID	VIGIA-REAL-009
PREPARED BY	Autonomous DFIR Agent
REPORT DATE	2026-06-12 UTC

01 Executive Summary

The subject, Steve Vogon, performed unauthorized data exfiltration by copying sensitive files from an administrative share, compressing them, and using a Perl script to exfiltrate data via an external HTTP proxy. The activity included a deliberate, multi-stage attack chain: acquiring a privilege escalation exploit via 'wget' from Metasploit, executing it, and configuring an external HTTP proxy to camouflage exfiltration traffic as standard web traffic. Memory analysis confirms the link between the user (UID 501) and the exfiltrated data resident in RAM, providing definitive attribution and evidence of the exfiltration in progress.

EXTRACTED ARTIFACTS

02 System Profile & Evidence Scope

PROPERTY	VALUE
Target Evidence Path	stevev
Analysis Timestamp	2026-06-12 13:39 UTC
Analysis Tooling	Autonomous MCP Framework

03 Extracted Artifacts Matrix

ARTIFACT NAME / IDENTIFIER	FORENSIC ANALYSIS & DESCRIPTION
Unauthorized File Copy	Mass copy of files from administrative share to personal directory detected in bash history.
Exploit Acquisition and Execution	Acquisition of privilege escalation exploit from Metasploit followed by execution, establishing intent for a multi-stage attack.
Proxy Configuration and Camouflage	Configuration of an external HTTP proxy to channel exfiltration traffic, specifically chosen to blend with standard web traffic to evade detection.
Exfiltration Traffic	Network traffic directed to an external proxy, camouflaged as normal web traffic.
Anti-Forensics	Deletion of the xfer.pl script after use to cover tracks.
Memory Analysis Evidence	Memory analysis confirms all suspicious strings map to user stevev (UID 501) and contains resident network packets with exfiltrated data, providing the definitive link between the actor and the exfiltration.
